

## IMG / IMGL Fact Sheet

### **Lowest Cost**

Our IMG/IMGL tooling is much less expensive – typically 30-50% lower than our competitors.

### **Lowest Risk**

Our game-changing IMG technology eliminates your production risk. If a tool is ever damaged, we can make a replacement tool in as little as 1 week, compared with 16-20 weeks for traditional methods.

### **Unmatched Durability**

GS Production tooling runs greater than 2MM parts per year across all major manufacturers. We guarantee our IMG tools to be free from manufacturing defect for the lifetime of your program. No one else offers this kind of guarantee.

### **No Size Limit**

We can build any tool, from glove boxes to IPs to headliners. Our technology does not have an inherent size limitation on tool or part size.

### **Best Performance**

Our tools have the best performance in terms of vacuum / air evacuation. This is because our technology allows us to tailor evacuation to your part geometry.

### **Prototypes are Production Representative**

Our prototype tooling is production representative – our prototypes can run hundreds of thousands of cycles. In addition, we can deliver a prototype tools 2-10 times faster and at a 30%-50% lower cost.

### **World Class Support**

We have the tools, people, and experience to guarantee your success. We have the in-house extensive in-house expertise to support you during all phases of your project. Service is available within 24 hours in North America and within 48 hours in Europe.
